

Ejercicio 1 ★

Sean las siguientes definiciones de funciones:

- intercambiar $(x,y) = (y,x)$	\boxed{I}	- asociarD $((x,y),z) = (x,(y,z))$
- espejar $(\text{Left } x) = \text{Right } x$		- flip $f x y = f y x$
espejar $(\text{Right } x) = \text{Left } x$		- curry $f x y = f (x,y)$
- asociarI $(x,(y,z)) = ((x,y),z)$		- uncurry $f (x,y) = f x y$

Demostrar las siguientes igualdades usando los lemas de generación cuando sea necesario:

- I. $\forall p :: (a,b) . \text{intercambiar} (\text{intercambiar } p) = p$
- II. $\forall p :: (a,(b,c)) . \text{asociarD} (\text{asociarI } p) = p$
- III. $\forall p :: \text{Either } a b . \text{espejar} (\text{espejar } p) = p$
- IV. $\forall f :: a \rightarrow b \rightarrow c . \forall x :: a . \forall y :: b . \text{flip} (\text{flip } f) x y = f x y$
- V. $\forall f :: a \rightarrow b \rightarrow c . \forall x :: a . \forall y :: b . \text{curry} (\text{uncurry } f) x y = f x y$

i) Por el lema de la paridad $(\forall p :: (x,y)) (\exists x :: a, y :: b) . (P = (x,y))$

$$\text{INTERCAMBIAR} (\text{INTERCAMBIAR} (x,y)) = (x,y)$$

Por el principio de reemplazo

$$\{I\} \text{ INTERCAMBIAR} (y,x) \stackrel{\{I\}}{=} (x,y)$$

Por el orden de paridad (nombra)

luego, la igualdad vale $\rightarrow \text{¿TIENCO Q ACTUALIZAR ALGO MAS?}$

ii) Por el lema de paridad.

$$(\forall p :: (x,(y,z)) (\exists x :: a, y :: b, z :: c) (\text{ASOCIAND} (\text{ASOCIAI} (x,(y,z)) = (x,(y,z))))$$

Por el principio de reemplazo

$$\stackrel{AI}{=} \text{ASOCIAND} ((x,y),z) \stackrel{AD}{=} (x,(y,z)) \quad \text{---} \quad =$$

luego, la igualdad vale $\rightarrow \text{¿TIENCO Q ACTUALIZAR ALGO MAS?}$

iii) Por el lema de generación de lemas

$$(\forall p :: \text{EITHER } x y) (\exists x :: a, y :: b) \text{ tq } P = \text{LEFT } x \text{ y } P = \text{RIGHT } y$$

Algunas ideas

• CASO $P = \text{LEFT } x$

$$\text{ESPEJAR} (\text{ESPEJAR} (\text{LEFT } x)) = \text{LEFT } x$$

$$\stackrel{\{EL\}}{=} \text{ESPEJAR} (\text{RIGHT } x) \stackrel{\{ER\}}{=} \text{LEFT } x$$

• CASO $P = \text{RIGHT } x$

$$\text{ESPEJAR} (\text{ESPEJAR} (\text{RIGHT } x)) = \text{RIGHT } x \quad \} =$$

$$\stackrel{\{ER\}}{=} \text{ESPEJAR} (\text{LEFT } x) \stackrel{\{EL\}}{=} \text{RIGHT } x$$

Luego, la igualdad vale

$$V) \forall f: a \rightarrow b \rightarrow c. \forall x: a. \forall y: b. (\text{CURRY}(\text{UNCURRY } f) \times y = f \times y)$$

Por P.P. o DE VENIENTE

$$(\text{CURRY}(\text{UNCURRY } f)) \times y \stackrel{\{c\}}{=} \text{UNCURRY } f (x, y) \stackrel{\{u\}}{=} f \times y$$

Luego, la igualdad vale

Ejercicio 2 ★

¿SIRVEN PARA HACER ANÁLOGAS? SI

Demostrar las siguientes igualdades utilizando el principio de extensionalidad funcional:

- I. flip . flip = id
- II. $\forall f: (a, b) \rightarrow c. \text{uncurry} (\text{curry } f) = f$
- III. flip const = const id
- IV. $\forall f: a \rightarrow b \rightarrow c. \forall g: b \rightarrow c. ((h \circ g) \circ f) = (h \circ (g \circ f))$
con la definición usual de la composición: $(.) f g x = f(g x)$.

DA FORMA

~

LEMMA GENERALIZACIÓN: 3

EXTENSIONALIDAD: A

↳ SPAWNAR COSAS.

i)

$$\text{FLIP}: (a \rightarrow b \rightarrow c) \rightarrow (b \rightarrow a \rightarrow c)$$

Objetivo para P.P.O. de EXTENSIONAL $\forall f: a \rightarrow b \rightarrow c$ vale que $(\text{FLIP} \circ \text{FLIP}) f = \text{id } f$

$$(\text{FLIP} \circ \text{FLIP}) f = \text{id } f$$

$$\stackrel{\{3\}}{=} \text{FLIP} (\text{FLIP } f) = \text{id } f$$

Objetivo para P.P.O. de EXTENSIONAL $\forall x: a$ vale que $\text{FLIP} (\text{FLIP } f) x = \text{id } f x$

Objetivo para P.P.O. de EXTENSIONAL $\forall y: b$ vale que $\text{FLIP} (\text{FLIP } f) y = \text{id } f y$

$$\text{FLIP} (\text{FLIP } f) x = \text{id } f x$$

$$\text{FLIP } f y x = \stackrel{\{FOP\}}{=} (\text{id } f) xy$$

$$\text{FLIP } f y x = \stackrel{\{ID\}}{=} f xy$$

$$f xy = \stackrel{\{FOP\}}{=} f xy$$

Como queríamos demostrar.

$$b) \forall f :: (a, b) \rightarrow c \cdot \text{UNCURRY} (\text{CURRY } f) = f$$

Por Propio de Ext Funcional: $(\forall p :: (a, b)) (\forall f :: (a, b) \rightarrow c) (\text{UNCURRY} (\text{CURRY } f) p = f p)$

Por Lema de Generación de Pares, $\{x : a, y : b\} (p = (x, y))$

$$\text{UNCURRY} (\text{CURRY } f) (x, y) = f(x, y)$$

$$\stackrel{\{x\}}{=} \text{CURRY } f x y = f(x, y)$$

$$\stackrel{\{y\}}{=} f(x, y) = f(x, y)$$

Conclusión demostrada

$$c) \text{FLIP CONST} = \text{CONST ID}$$

$$\text{FLIP CONST} : b \rightarrow a \rightarrow a$$

Por Propio de Ext Funcional $(\forall x : a) (\text{FLIP CONST } x = \text{CONST ID } x)$

Por Propio de Ext Funcional $(\forall y : b) (\text{FLIP CONST } x y = (\text{CONST ID } x) y)$

$$\text{CONST} : a \rightarrow b \rightarrow a$$

$$\text{FLIP CONST } x y = \text{CONST ID } x y$$

$$\text{ID} : a \rightarrow a$$

$$\text{FLIP CONST } x y = \stackrel{\{x\}}{=} \text{id } y$$

$$\text{CONST } y x = \stackrel{\{y\}}{=} \text{id } y$$

$$y = \stackrel{\{\text{id}\}}{=} y$$

d) Por Ext Funcional $\forall f :: a \rightarrow b, \forall g :: b \rightarrow c, \forall h :: c \rightarrow d . (h \cdot g) \cdot f = h \cdot (g \cdot f)$

$$((h \cdot g) \cdot f) x = h \cdot (g \cdot f) x$$

$$\stackrel{\{x\}}{=} (h \cdot g) (f x)$$

$$\stackrel{\{x\}}{=} h(g(f x)) \stackrel{\{x\}}{=} (h \cdot g)(f x)$$

$$= h(g(f x)) \stackrel{\{x\}}{=} h(g(f x))$$

Demostrar las siguientes propiedades:

- I. $\forall xs :: [a] . \text{length} (\text{duplicar } xs) = 2 * \text{length } xs$
- II. $\forall xs :: [a] . \forall ys :: [a] . \text{length} (xs ++ ys) = \text{length } xs + \text{length } ys$
- III. $\forall xs :: [a] . \forall x :: a . \text{append} [x] xs = x : xs$
- IV. $\forall xs :: [a] . \forall f :: (a \rightarrow b) . \text{length} (\text{map } f xs) = \text{length } xs$
- V. $\forall xs :: [a] . \forall p :: a \rightarrow \text{Bool} . \forall e :: a . ((\text{elem } e (\text{filter } p xs)) \Rightarrow (\text{elem } e xs))$ (asumiendo Eq a)
- VI. $\forall xs :: [a] . \forall x :: a . \text{ponerAlFinal } x xs = xs ++ (x : [])$
- VII. $\text{reverse} = \text{foldr} ((x \text{ rec} \rightarrow \text{rec} ++ (x : []))) [] \rightarrow \text{CAS}$
- VIII. $\forall xs :: [a] . \forall x :: a . \text{head} (\text{reverse} (\text{ponerAlFinal } x xs)) = x$

↓ JUM PEQUEÑA

3)

i) Por Ind Est en xs

$$P(xs) = \text{LENGTH}(\text{Duplicar } xs) = 2 * \text{LENGTH}(xs)$$

CASO BASE:

$$P([]) : \text{LENGTH}(\text{Duplicar } []) = 2 * \text{LENGTH}([])$$

$$\bullet \text{LENGTH}(\text{Duplicar } []) \stackrel{\{[]\}}{=} \text{LENGTH}([]) \stackrel{\{[]\}}{=} 0$$

$$\bullet 2 * \text{LENGTH}([]) \stackrel{\{[]\}}{=} 2 * 0 = 0$$

$\text{LEN}(\text{DUPUCAN}([])) = \text{LEN}([]) = 0$

PASO INDUCTIVO:

- H_i: $\text{LENGTH}(\text{DUPUCAN}(x:s)) = 2 * \text{LENGTH}(xs)$;
- T_i: $\text{LENGTH}(\text{DUPUCAN}(x:s)) = 2 * \text{LENGTH}(x:xs)$;

$\text{LENGTH}(\text{DUPUCAN}(x:s))$

$$\begin{aligned}
 & \stackrel{\{D\}}{=} \text{LENGTH} \left(\overbrace{x : x}^x \overbrace{s}^{xs'} \right) \\
 & \stackrel{\{I\}}{=} 1 + \text{LENGTH}(x : \text{DUPUCAN}(xs')) \\
 & \stackrel{\{H\}}{=} 1 + \text{LENGTH}(\text{DUPUCAN}(xs')) \\
 & \stackrel{\{i\}}{=} 2 + \text{LENGTH}(xs') \\
 & \stackrel{*}{=} 2 + 2 * \text{LENGTH}(xs') \\
 & \stackrel{\{I\}}{=} 2(1 + \text{LENGTH}(xs')) \\
 & \stackrel{\{H\}}{=} 2 + \text{LENGTH}(x:xs') \quad \checkmark
 \end{aligned}$$

* FACTOR COMÚN

→ xs/s en ambas se da igual. Es big O.

iii) $P(xs) = \forall ys :: [s] . \text{LENGTH}(xs ++ ys) = \text{LENGTH}(xs) + \text{LENGTH}(ys)$

CASO BASE: $P([])$

$$\text{LENGTH}([s] ++ ys) = \underbrace{\text{LENGTH}([s])}_1 + \underbrace{\text{LENGTH}(ys)}_2$$

1. $\text{LENGTH}([s] ++ ys) = \text{LENGTH}(ys)$

Por definición de LISTAS:

1. $zs = []$

2. $\exists z :: s . z \in s[s] . ys = (z : zs)$

CASO 1: $ys = []$

$$\text{LENGTH}([]) \stackrel{\{I\}}{=} 0$$

CASO 2: $ys = (z : zs)$

$$\text{LENGTH}(z : zs) \stackrel{\{L\}}{=} 1 + \text{LENGTH}(zs)$$

2. $\text{LENGTH}([]) + \text{LENGTH}(ys)$

$$= 0 + \text{LENGTH}(ys)$$

$$= \text{LENGTH}(ys) \quad \checkmark$$

Se cumple el caso base.

$P(x:s) \rightarrow P(s:xs)$

¿Dónde se procede?

Si la respuesta es no, ¿cuál?

PASO INDUCTIVO: Unir los A para el caso de extensión

- Hi: $\text{LENGTH}(xs + ys) = \text{LENGTH } xs + \text{LENGTH } ys$
- Ti: $\text{LENGTH}((x:xs) + ys) = \text{LENGTH}(x:xs) + \text{LENGTH } ys$

$$\begin{aligned}\text{LENGTH}((x:xs) + ys) \\ \stackrel{\{i+1\}}{=} \text{LENGTH}(x:(xs + ys)) \\ \stackrel{\{L1\}}{=} 1 + \text{LENGTH}(xs + ys) \\ \stackrel{H_i}{=} 1 + \text{LENGTH } xs + \text{LENGTH } ys \\ \stackrel{\{L1\}}{=} \text{LENGTH}(x:xs) + \text{LENGTH } ys \quad \checkmark\end{aligned}$$

Como queríamos probar.

$$iii) P(xs) = A_{x...o} \cdot \text{APPEND}[x] \; xs = x:xs$$

CASO BASE: $P([])$

$$\underbrace{\text{APPEND}[x] []}_1 = \underbrace{x:[]}_2 \quad \rightsquigarrow xs + ys \quad xs...(:)ys$$

1. APPEND[x] [] .

$$\begin{aligned}\stackrel{\{A_0\}}{=} & \text{FOLDR}(:) [] [x] \\ \stackrel{\{F1\}}{=} & x:(\text{FOLDR}(:) [] []) \\ \stackrel{\{F2\}}{=} & x:[] \\ \stackrel{\{:3\}}{=} & [x]\end{aligned}$$

2. $x:[]$

$$\stackrel{\{:3\}}{=} [x]$$

PASO INDUCTIVO: $P(xs) \Rightarrow P(x:xs)$

- Hi: $\text{APPEND}[x] \; xs = x:xs$
- Ti: $\text{APPEND}[x] \; (x:xs) = x:(x:xs)$

APPEND[x] (x:xs)

$$\stackrel{\{A_0\}}{=} \text{FOLDR}(:) (x:xs) [x]$$

$\vdash x : (\text{FOLDR}(:) (x:xs)) []$
 $\vdash x : (x:xs)$ *¿No es igual? ✓*
sólo el "MAP" tiene xs (los demás).

iv) $P(xs) = (\forall f : a \rightarrow b) ((\text{LENGTH}(\text{MAP } f xs) = \text{LENGTH } xs))$

Caso BASE: $P([])$

$\{\eta\} \text{MAP } f [] = \text{FOLDL}((\lambda x \text{ rec} \rightarrow f x : \text{rec}) [])$

$\text{LENGTH}(\text{MAP } f [])$ = $\text{LENGTH}([])$

1. $\text{LENGTH}(\text{MAP } f [])$

$\{\eta\} = \text{LENGTH}(\text{FOLDL}((\lambda x \text{ rec} \rightarrow f x : \text{rec}) []))$

$\{\text{FO}\} = \text{LENGTH}([])$

$\{\text{LO}\} = 0$

2. $\text{LENGTH}([])$

$\{\text{LO}\} = 0$

PASO INDUCTIVO: $(\forall f : a \rightarrow b) (\forall xs : [a]) (\forall x : a) (P(x) \Rightarrow P(x:xs))$

· Ii: $(\forall f : a \rightarrow b) (\forall xs : [a]) (\text{LENGTH}(\text{MAP } f xs) = \text{LENGTH}(xs))$

· Ti: $(\forall f : a \rightarrow b) (\forall xs : [a]) (\forall x : a) (\text{LENGTH}(\text{MAP } f (x:xs)) = \text{LENGTH}(x:xs))$

$\text{LENGTH}(\text{MAP } f (x:xs))$

$\{\eta\} = \text{LENGTH}(\text{FOLDL}(\dots) [] (x:xs))$

$\{\text{FO}\} = \text{LENGTH}(x : (\text{FOLDL}(\dots) [] xs))$

$\{\text{H}\} = \text{LENGTH}(x : \text{MAP } f xs)$

$\{\text{G}\} = 1 + \text{LENGTH}(\text{MAP } f xs)$

$\{\text{U}\} = 1 + \text{LENGTH } xs$

$\{\text{I}\} = \text{LENGTH}(x:xs) ✓$

v) $P(xs) = (\forall xs : [a]) (\forall p : a \rightarrow \text{Bool}) (\forall e : a) ((\text{ELEM } e (\text{FILTER } p xs)) \Rightarrow (\text{ELEM } e xs))$

Otro caso similar V, con los mismos enunciados.

Caso BASE: $P([])$

$\text{ELEM } e (\text{FILTER } p [])$ \Rightarrow $\text{ELEM } e []$

1. $\exists_{\text{VFN}} e (\text{FILTER } P [])$

$$\begin{aligned} \{P\} &= \exists_{\text{VFN}} e (\text{FOLDR}(\lambda x \text{ rec} \rightarrow \text{IF } P x \text{ THEN } x : \text{REC } \exists_{\text{VFN}} e x) [] []) \\ \{F_0\} &= \exists_{\text{VFN}} e [] \\ \{E_0\} &= \text{FALSE} \end{aligned}$$

2. $\exists_{\text{VFN}} e []$

$$\{E_0\} = \text{FALSE}$$

PASO INDUCTIVO: $(\forall_{xs:[a]}) (\forall_{x:a}) (P(x:s) \Rightarrow P(x:xs))$

$$P(xs) : (\forall_{xs:[a]})(\forall P: a \rightarrow \text{BOOL})(\forall e:a) (\exists_{\text{VFN}} e (\text{FILTER } P x:s) \Rightarrow \exists_{\text{VFN}} e x:s)$$

$$P(x:xs) : (\forall x:a)(\forall_{xs:[a]})(\forall P: a \rightarrow \text{BOOL})(\forall e:a) (\exists_{\text{VFN}} e (\text{FILTER } P (x:xs)) \Rightarrow \exists_{\text{VFN}} e (x:xs))$$

Damos que los V tienen siempre preferencia que el ANTECEDENTE de VERDADERA.

Damos $T_{\text{NFE}} = \exists_{\text{VFN}} e (\text{FILTER } P (x:xs)) \checkmark$

e ESTÁ EN $(x:xs)$ luego de filtrar con P.

$\exists_{\text{VFN}} e (x:xs)$

$$\{E_1\} = P = x \quad || \quad \exists_{\text{VFN}} e x:s$$

Por el tema de generación de booleanos

$$1) e == x = T_{\text{NFE}}$$

$$2) e == x = \text{FALSE}$$

CASO $(e == x = \text{TRUE})$

$$= T_{\text{NFE}} \quad || \quad \exists_{\text{VFN}} e x:s$$

$$\{ \text{BOOL} \} = T_{\text{NFE}}$$

```
foldr :: (a -> (b -> b)) -> b -> [a] -> b
\f\z\[] = <
\f\z\z = f x (foldr f z xs)
```

Vi) $P(xs), \forall xs : [a] \pi q P(xs) \equiv (\forall x : a) (PONERALFINAL x xs = xs ++ (x : []))$

(ASO BASE: $P([])$)

$$\underbrace{PONERALFINAL}_{1} \times \underbrace{[]}_{2} = \underbrace{[]}_{2} ++ \underbrace{(x : [])}_{1}$$

1. $PONERALFINAL \times []$

$$\stackrel{\{P_0\}}{=} \text{FOLDR}(\lambda) (x : []) []$$

$$\stackrel{\{f_0\}}{=} (x : [])$$

$$\stackrel{\{:}\}{=} [x] \checkmark$$

= Sí. **DP.**

Ejercicio 5 ★

Dadas las siguientes funciones:

```
zip :: [a] -> [b] -> [(a,b)]
{Z'0} zip = foldr (\x rec ys ->
  {xs ys} if null ys
  then []
  else (x, head ys) : rec (tail ys))
  (const []) xs) ys
```

```
zip' :: [a] -> [b] -> [(a,b)]
{Z'0} zip' [] ys = []
{Z'1} zip' (x:xs) ys = if null ys then [] else (x, head ys) : zip' xs (tail ys)
```

Demostrar que $\text{zip} = \text{zip}'$ utilizando inducción estructural y el principio de extensiónalidad.

Antes de la demostración, necesitamos tener el PPIJ. Se da la función fun .

demostrar que vale la igualdad para xs, ys .

Por el PPIJ de fun : $(\forall xs: [a])(\forall ys: [b])(\text{zip } xs \text{ } ys = \text{zip}' xs \text{ } ys)$

Otro, por inducción: $P(xs) = (\forall ys: [b])(\text{zip } xs \text{ } ys = \text{zip}' xs \text{ } ys)$

(Caso base: $P([])$): $\text{zip } [] \text{ } ys = \text{zip}' [] \text{ } ys$

1.

2.

1. $\text{ZIP} [] \gamma_S$

$$\begin{aligned} & \stackrel{\{z\}}{=} (\text{FOLDL}(\dots) (\text{CONST} []) []) \gamma_S \\ & \stackrel{\{f\}}{=} [\text{CONST} []] \gamma_S \\ & \stackrel{\{c\}}{=} [] \end{aligned}$$

$$\text{FOLDL } f \ z [] = z$$

$$\text{FOLDL } f z (x : x_S) f x (\text{FOLDL } f z x_S)$$

$$\text{CONST } x \cdot y = x$$

2. $\text{ZIP}' [] \gamma_S$

$$\stackrel{\{z\}}{=} []$$

Al cumplir el caso base :

PASO INDUCTIVO: $P(x_S) \Rightarrow P(x : x_S)$

$$\cdot P(x_S) : (\forall s : [b]) (\text{ZIP } x_S \gamma_S = \text{ZIP}' x_S \gamma_S)$$

$$\cdot P(x : x_S) : (\forall s : [b]) (\underline{\text{ZIP} (x : x_S) \gamma_S} = \underline{\text{ZIP}' (x : x_S) \gamma_S})$$

Ahora que los \forall están siempre presentes.

? Igualmente BIEN cuando el γ_S lleva la acción. (Después del Pabell TERMINADO)

1. $\text{ZIP} (x : x_S) \gamma_S$ el FOLD?

$$\begin{aligned} & \stackrel{\{z\}}{=} (\text{FOLDL} ((|x \text{ rec } \gamma_S \rightarrow \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{REC}(\text{TAIL } \gamma_S)) (\text{CONST} [])) (x : x_S) \gamma_S \\ & \stackrel{\{f\}}{=} ((|x \text{ rec } \gamma_S \rightarrow \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{REC}(\text{TAIL } \gamma_S)) \times (\text{FOLDL } f (\text{CONST} []) x_S) \gamma_S \\ & \stackrel{\{g\}}{=} ((|\text{REC } t \rightarrow \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{REC}(\text{TAIL } \gamma_S)) \text{ ZIP } x_S \\ & \quad \text{FOLDL} ((|x \text{ rec } \gamma_S \rightarrow \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{REC}(\text{TAIL } \gamma_S)) (\text{CONST} []) x_S) \gamma_S \\ & = ((|\text{REC } t \rightarrow \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{REC}(\text{TAIL } \gamma_S)) (\text{ZIP } x_S) \gamma_S \\ & \stackrel{\{h\}}{=} ((|\gamma_S \rightarrow \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{ZIP } x_S(\text{TAIL } \gamma_S)) \gamma_S \\ & \stackrel{\{i\}}{=} \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{ZIP } x_S(\text{TAIL } \gamma_S) \\ & \stackrel{\{j\}}{=} \text{IF } \text{NULL } \gamma_S \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } \gamma_S) : \text{ZIP}' x_S(\text{TAIL } \gamma_S) \end{aligned}$$

Por el tema de generación de líneas en γ_S

1. $\gamma_S : []$

2. $(\exists z : b, z_S : [b]) | \gamma_S = (z : z_S)$

Caso 1 | $\gamma_S : []$

$$\text{IF } \text{NULL } [] \text{ THEN } [] \text{ ELSE } (x, \text{HEAD } []) : \text{ZIP}' x_S (\text{TAIL } [])$$

$$\stackrel{\{l\}}{=} [] \checkmark$$

$$\text{ZIP}' (x : x_S) []$$

$\begin{cases} \text{if } \text{null}(z:zs) \\ \quad \text{then } [] \\ \quad \text{else } (x, \text{head}(z:zs)) : z:\text{p}' \times s(\text{tail}(z:zs)) \\ \end{cases}$
 $= []$

(ASO 2) $y: (z:zs)$

Ejercicio 5 *

Dadas las siguientes funciones:

```

zip :: [a] -> [b] -> [(a,b)]
(Z0) zip = foldr (\x rec ys ->
  if null ys
  then []
  else (x, head ys) : rec (tail ys))
  (const [])
zip' :: [a] -> [b] -> []
(Z1) zip' [] ys = []
(Z2) zip' (x:xs) ys = if null ys then []
  else (x, head ys) : zip' xs (tail ys)
  
```

Demostrar que $\text{zip} = \text{zip}'$ utilizando inducción estructural y el principio de extensionalidad.

Ejercicio 6 *

Dados los siguientes funciones:

```
and : Eq a => [a] -> [a]
```

```
(S0) and [] = []
```

```
(S1) and (x:xs) = x : filter (\y -> x /= y) (and xs)
```

```
union :: Eq a => [a] -> [a]
```

```
(S0) union xs ys = and (xs,ys)
```

```
intersect :: Eq a => [a] -> [a]
```

```
(S0) intersect xs ys = filter (\x -> elem x ys) xs
```

Indicar si las siguientes propiedades son verdaderas o falsas. Si son verdaderas, realizar una demostración. Si son falsas, presentar un contrejemplo.

- I. Eq a -> V xs:[a]. \forall i:a. \forall j:a. elem e xs \& p e = elem e (filter p xs)
- II. Eq a -> V xs:[a]. \forall i:a. elem e xs = elem e (mb xs)
- III. Eq a -> V xs:[a]. \forall ys:[a]. elem e (union xs ys) = (elem e xs) || (elem e ys)
- IV. Eq a -> V xs:[a]. \forall ys:[a]. \forall e:a. elem e (intersect xs ys) = (elem e xs) \& (elem e ys)
- V. Eq a -> V xs:[a]. \forall ys:[a]. length (union xs ys) = length xs + length ys
- VI. Eq a -> V xs:[a]. \forall ys:[a]. length (union xs ys) \leq length xs + length ys

i) VERDADERA.

$$\Leftrightarrow \text{ELEM e } (\text{INTERSECT } xs \text{ } ys) = (\text{ELEM e } (\text{INTERSECT } xs \text{ } ys)) \checkmark$$

Ejercicio 9 ★

Dadas las funciones altura y cantNodos definidas en la práctica 1 para árboles binarios, demostrar la siguiente propiedad:

$$\forall x :: \text{AB} \ a . \text{altura } x \leq \text{cantNodos } x$$

$$P(x) = (\forall x : \text{AB } a) (\text{ALTURA } x \leq \text{CANTNODOS } x)$$

Caso Base: $P(\text{NIL})$

$$\Leftrightarrow \text{ALTURA NIL} \leq \text{CANTNODOS NIL}$$

{AB}

$$\Leftrightarrow \text{FOLGBAB}((lc \times rc \rightarrow 1 + \max lc \text{ } rc) \circ \text{NIL} \leq \text{CANTNODOS NIL})$$

{FOLGBAB}

$$\Leftrightarrow 0 \leq \text{CANTNODOS NIL}$$

{CANTNODOS}

$$\Leftrightarrow 0 \leq \text{FOLGBAB}((lc \times rc \rightarrow 1 + lc + rc) \circ \text{NIL})$$

{FOLGBAB}

$$\Leftrightarrow 0 \leq 0$$

Paso inductivo: $(\forall i : \text{AB } a) (\forall d : \text{AB } a) (\forall r : \text{AB } a) (P(i) \wedge P(d) \Rightarrow P(\text{BIR } i \text{ } r \text{ } d))$

• $P(i) : (\forall i : \text{AB } a) (\text{ALTURA } i \leq \text{CANTNODOS } i)$

$P(d) : (\forall d : \text{ABD}) (\text{Alguna } d \leq \text{CANTNODOS } d)$

$\cdot P(\text{Bin} ir d) : (\forall r : \text{ABD}) (\forall a : \text{ABD}) (\text{Altura } (\text{Bin} ir d) \leq \text{CANTNODOS } (\text{Bin} ir d))$

$\text{Altura } (\text{Bin} ir d) \leq \text{CANTNODOS } (\text{Bin} ir d)$

{A}

$\Leftrightarrow \text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) \circ (\text{Bin} ir d)) \leq (\text{CANTNODOS } (\text{Bin} ir d))$

{Cn}

$\Leftrightarrow \text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) \circ (\text{Bin} ir d)) \leq \text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{LC} + \text{RC}) \circ (\text{Bin} ir d))$

{FAM}

$\Leftrightarrow ((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) (\text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) \circ i)) \Gamma (\text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) \circ d)) \leq$

{A}

$\Leftrightarrow ((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) (\text{Altura } i)) \Gamma (\text{Altura } d) \leq \text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{LC} + \text{RC}) \circ (\text{Bin} ir d))$

{Hi}

$\Leftrightarrow ((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) (\text{CANTNODOS } i)) \Gamma (\text{CANTNODOS } d) \leq \text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{LC} + \text{RC}) \circ (\text{Bin} ir d))$

{FAM}

$\Leftrightarrow ((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) (\text{CANTNODOS } i)) \Gamma (\text{CANTNODOS } d) \leq ((\text{LC} \times \text{RC} \rightarrow 1 + \text{LC} + \text{RC}) (\text{CANTNODOS } i)) \Gamma (\text{FOLDAB}((\text{LC} \times \text{RC} \rightarrow 1 + \text{LC} + \text{RC}) \circ d))$

{Cn}

$\Leftrightarrow ((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{LC } \text{RC})) (\text{CANTNODOS } i)) \Gamma (\text{CANTNODOS } d) \leq ((\text{LC} \times \text{RC} \rightarrow 1 + \text{LC} + \text{RC}) (\text{CANTNODOS } i)) \Gamma (\text{CANTNODOS } d)$

{B}

$\Leftrightarrow ((\text{LC} \times \text{RC} \rightarrow 1 + \text{MAX } (\text{CANTNODOS } i)) \text{RC}) \Gamma (\text{CANTNODOS } d) \leq ((\text{LC} \rightarrow 1 + \text{MAX } (\text{CANTNODOS } i)) + \text{RC}) \Gamma (\text{CANTNODOS } d)$

{Sd}

$\Leftrightarrow ((\text{LC} \rightarrow 1 + \text{MAX } (\text{CANTNODOS } i)) \text{RC}) (\text{CANTNODOS } d) \leq ((\text{LC} \rightarrow 1 + (\text{CANTNODOS } i) + \text{RC}) (\text{CANTNODOS } d))$

{B}

$\Leftrightarrow 1 + \text{MAX } (\text{CANTNODOS } i) (\text{CANTNODOS } d) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$

{Max}

$\Leftrightarrow 1 + (\text{IF } (\text{CANTNODOS } i) \geq (\text{CANTNODOS } d) \text{ THEN } (\text{CANTNODOS } i) \text{ ELSE } (\text{CANTNODOS } d)) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$

Por el lenguaje de generación deBool temporal veremos:

1. $(\text{CANTNODOS } i) \geq (\text{CANTNODOS } d) = \text{TRUE}$

2. $(\text{CANTNODOS } i) \geq (\text{CANTNODOS } d) = \text{FALSE}$

CASO 1:

$\Leftrightarrow 1 + (\text{IF } (\text{CANTNODOS } i) \geq (\text{CANTNODOS } d) \text{ THEN } (\text{CANTNODOS } i) \text{ ELSE } (\text{CANTNODOS } d)) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$

$\Leftrightarrow 1 + (\text{IF } \text{TRUE } \text{ THEN } (\text{CANTNODOS } i) \text{ ELSE } (\text{CANTNODOS } d)) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$

{IFt}

$\Leftrightarrow 1 + (\text{CANTNODOS } i) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$ VERDADERO POR INT. ✓

CASO 2:

$\Leftrightarrow 1 + (\text{IF } (\text{CANTNODOS } i) \geq (\text{CANTNODOS } d) \text{ THEN } (\text{CANTNODOS } i) \text{ ELSE } (\text{CANTNODOS } d)) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$

$\Leftrightarrow 1 + (\text{IF } \text{FALSE } \text{ THEN } (\text{CANTNODOS } i) \text{ ELSE } (\text{CANTNODOS } d)) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$

{IFf}

$\Leftrightarrow 1 + (\text{CANTNODOS } d) \leq 1 + (\text{CANTNODOS } i) + (\text{CANTNODOS } d)$ VERDADERO POR INT. ✓

Ejercicio 12 ★

Dados el tipo Polinomio definido en la práctica 1 y las siguientes funciones:

derivado :: Num a => Polinomio a -> Polinomio a
derivado poli = case poli of

X -> Cte 1

Cte _ -> Cte 0

Suma p q -> Suma (derivado p) (derivado q)

Prod p q -> Suma (Prod (derivado p) q) (Prod (derivado q) p)

sinConstantesNegativas :: Num a => Polinomio a -> Polinomio a
sinConstantesNegativas = foldPoli True (≥ 0) (&&&)

esRaiz :: Num a => Polinomio a -> Bool
esRaiz n p = evaluar n p == 0

Demostrar las siguientes propiedades:

I. Num a => $\forall p : \text{Polinomio } a . \forall q : \text{Polinomio } a . \forall r : \text{a} . (\text{esRaiz } r p \Rightarrow \text{esRaiz } r (\text{Prod } p q))$

II. Num a => $\forall p : \text{Polinomio } a . \forall k : \text{a} . \forall e : \text{a} . (\text{evaluar } e (\text{derivado } (\text{Prod } (\text{Cte } k) p)) = \text{evaluar } e (\text{Prod } (\text{Cte } k) (\text{derivado } p)))$

III. Num a => $\forall p : \text{Polinomio } a . (\text{sinConstantesNegativas } p \Rightarrow \text{sinConstantesNegativas } (\text{derivado } p))$

La recursión utilizada en la definición de la función `derivado` ¿es estructural, primitiva o ninguna de las dos? → PUNTO A

↓
No es estructural.

No es global y no usa en cada paso todos los resultados de las

recursiones anteriores.
